

MKT MACHINING

3D Printed Bolt Knob Instructions

Thank you for purchasing our product, and make sure to check back for new products, both printed and CNC machined from aluminum.

This bolt knob is printed with somewhat “tight” threads. For the best installation, we recommend using a thread locker, specifically Loctite 425 which is made for polymer to metal applications. Thread the bolt knob on to the desired location (this knob is designed for a flush fit on the Ruger Precision Rifle), and if thread locker is used, let dry overnight before use. Enjoy the enhanced leverage and grip this bolt knob gives and go shooting!
