V2/Sporter Bayonet Adapter Instructions

Thanks for purchasing our Magnetospeed V2/Sporter Adapter. This part is made from aircraft-grade 6061 Aluminum, & Type III Hardcoat Anodized for a highly durable finish.

To install your adapter, remove the bayonet strap and any hardware attached. Pass one bolt through the center of your bayonet, then thread into the adapter to secure the two. To install bayonet onto plate, insert bolts through the V2/Sporter Adapter, then thread into the plate, while clamping the adjustment rod. This essentially converts your V2/Sporter bayonet to having the same bracket as a V3 bayonet.

Let us know if you have any questions, we're always glad to help.

MAKE SURE YOU AREN'T GOING TO SHOOT YOUR BAYONET BEFORE FIRING!
