

Magneto Mount Stock Adapter Instructions

Thanks for purchasing our product! Reviews and customer satisfaction are extremely important to us, and we truly appreciate when someone takes the time to leave an Amazon or website rating. Amazon in particular stresses a high priority on customer feedback.

To install this stock adapter, you will remove your existing sling stud, and replace it with our product. A 10-32 bolt is included, which will thread into most stocks.

Torque the adapter to a reasonable amount, stocks with metal threads will be able to withstand more torque than a directly threaded synthetic stock.

Place the adapter on the stock so that the sling stud is “rearward”, and the threaded holes where the Magneto Mount installs are at the muzzle end of the stock. This will allow use of a bipod with the chronograph simultaneously.
