

MK MACHINING

T-Post Target Mount Instructions

Setup for this mount is very simple. Loosen bolts so the mount can slide onto your T-Post. TIGHTEN BOLTS HARD at height desired, in between the “nubs” on the post. For a mount that won’t be moved much, Loctite can provide a more permanent grip. Place the spring in between the target and mount, and tighten to put the target under tension, but do not fully compress the spring.

For enhanced T-Post Mounts, a “wing” slides into the bracket, which is clamped by another carriage bolt. A protector plate can also be hung from this bolt. Now you’re ready to go ring steel!
